CALL FOR PAPERS

INTERNATIONAL CONFERENCE

"TRANSFORMATIONS OF POSTWAR EUROPE: MEDICINE, BODIES AND TECHNOLOGIES"

Dates: 28 – 30 May 2024

Location: Sofia, Bulgaria

The postwar era was marked by a rapid growth of technologies that developed in different social, economic, political contexts on both sides of the Iron Curtain. Was this development dependent on the specific contexts and how? Or, was it a universal tendency establishing itself regardless of the ideological settings? Did technology play back on ideology? Could it re-shape political utopias and institutional practices? The conference aims to explore the transformation of post-war Europe through the lens of medicine, care and related technologies, thus contributing to a deeper understanding of the changing concept of care and hence the changes of relationships between the individual, the society, and the state. Based on the assumptions of the ERC funded LEVIATHAN project, the emphasis is on the interconnectedness of Europe, on the entangled history that involves different forms of interaction – intersections, exchanges, competition, conflicts – between “the blocs”, between different societies and states.

Technologies are seen in a broad sociological-anthropological perspective as part of biopolitics, i.e., the social and political power governing over bodies and minds, intertwined with technologies of governing the Self. Special emphasis is placed on medical technologies and the variety of ethical issues associated with them and their essential role in defining and changing medical staff - patient relationships.

We invite papers dealing with the topics of technologies, views on body-mind divisions/interconnectedness, concepts of care from different disciplines in several subthemes:

Technologies of (self)governmentality: (self)care and (self)control

- The normalizing gaze: regulations and legislation; measuring bodies and minds; classifications, statistics and theories
- The body as archive: documentation, its secrètes, gaps and deficits
- Discourses of care: medical innovation and technological advancement; the power of the experts

ERC Synergy Grant Project Leviathan, Horizon 2020; GA 854503

- Infrastructures of care: devices, institutions, practices
- Care for the disabled and the elderly between social isolation and integration: concepts, methods, ideas, and practices

Technologies of the collective body

- The dream of the healthy nation: eugenics, birth control, combating infant mortality, marriage restrictions
- Public health and hygiene: vaccines, immunizations and controlling epidemics. Health promotion, sport, etc.
- Pharmaceutical industry during the Cold War. Research, exchange, borrowing, patents and generics.
- Nutrition and diets; an emerging discipline and its practical implications
- Nature as technology: from vernacular sociocultural practices of care and healing, to the regulated utilization of natural resources for medical purposes

Utopias, delusions, risks

- Mind as an object of science in the 20th century: interdisciplinary fields, scientific networks, cultural contacts.
- Languages and technologies of mind: suffering, treatments, and nosography in the “psy field”
- Dreams and projects of revitalization, prolonged and eternal life
- The birth of the gifted child. Engineering the ”harmoniously developed personality”
- Technologies of beauty and strength. Modulated bodies

Visualizations and representations

- Visual technologies and imaginations in medical discourses
- Images and visualizations of body and mind
- Media and health
- Audiovisual technologies and their use in narrating bodies

Comparative and/or case studies research in a broader international context is welcome.

The working language of the conference is English. We invite interested authors to send a 250-word abstract, five keywords, and a 50-word biography by **20 November 2023**, to the following email: medicalanthropology@iefem.bas.bg

Feedback from the Organising Committee will be circulated by **1 December 2023**.

ERC Synergy Grant Project Leviathan, Horizon 2020; GA 854503

A peer-reviewed publication is planned.

Please note that, while there is no conference fee, participants are expected to cover their expenses.

We are exploring the possibility to organise the conference in a limited hybrid form (with the prospect to arrange some of the panels both online and offline). Please include your possible choice in the email containing your conference abstract. We are looking forward to receiving your proposals!

ORGANISING COMMITTEE:

Assoc. Prof. PhD Anelia Kassabova, Prof. PhD Daniela Koleva, Assoc. Prof. PhD Kristina Popova, Assoc. Prof. PhD Mila Maeva, Dr. Denitsa Nencheva, Dr. Tiago Pires, PhD candidate Geogri Todorov, PhD candidate Inxhi Brisku, PhD candidate Slava Savova, PhD candidate Stamen Kanev, Zhanin Todorova
